$$\min_w J(w)$$

Linear Programming

Farmer wants to grow **apples** and **bananas**.

	Acreage needed [m ² /ton]	Fertilizer needed [kg/ton]	Profit [USD/ton]
A	4000	60	700
B	3000	80	600

Farmer has a field of 100 000 m² and can legally use no more than 2000 kg fertilizer.

What to plant to maximize profit?
